

RYAN MCCURRY

+1 (425) 736-7824 | ryan24mccurry@gmail.com | Seattle, WA

PROFESSIONAL SUMMARY

Data scientist and analyst with a SaaS background and hands-on experience building full-stack analytics tools that turn complex data into actionable insights. Pursuing a master's in applied data science (AI concentration) at the University of Michigan, with experience spanning the analytics workflow from data pipelines to modeling to product delivery.

EDUCATION

University of Michigan

Master's, Applied Data Science (MADS) | Concentration: Artificial Intelligence (AI)

Expected April 2027

University of Arizona

Bachelor's of Science, Management Information Systems and Operations Management

Graduated December 2019

EXPERIENCE

University of Michigan Athletics - Hockey Analytics

Data Analytics Intern

July 2026 - Present

Remote, USA

- Built a full-stack analytics dashboard (Python/Flask, React) for the Director of Analytics, consolidating three seasons of fragmented Excel workbooks into a unified, queryable Flask API through close collaboration with coaching staff
- Applied problem solving to design a sortable stats table and game-detail views enabling coaching staff to analyze team vs. opponent trends across 200+ games; delivered as a functioning prototype approved for site integration

RallyUp

Customer Success Specialist

May 2025 – March 2026

Remote, USA

- Spearheaded AI chat integration using an internal knowledge base, reducing ticket volume by 25% and autonomously resolving 50% of customer inquiries, enabling 24/7 platform coverage without additional headcount
- Delivered monthly analytics reports translating customer feedback into product roadmap insights through clear communication, partnering in cross-functional collaboration with product, sales, and service teams to improve retention

Under.io

Customer Success Manager

April 2023 – July 2024

Remote, USA

- Designed and launched new pricing models through in-depth market research and creative problem solving, increasing conversion rates by 10% within three months
- Streamlined onboarding processes and led cross-team communication on product positioning, reducing setup time by 75% and strengthening competitive advantage

DATA SCIENCE PROJECT EXPERIENCE

Bang for the Buck(et): NBA Player Performance vs. Contract Value

Graduate Milestone Team Project

May 2026 – June 2026

Remote, USA

- Built two data pipelines in Python using pandas, scraping and joining NBA API stats with Basketball-Reference salaries across 10 NBA seasons (2,973 player-seasons) to create a unified dataset for salary-efficiency analysis
- Fit an OLS regression model ($R^2 = 0.60$) predicting salary cap allocation from performance metrics; found players aged 19–22 perform at 91% of league average but earn just 41% of league-average pay share

Retail Customer Churn Prediction

Independent Project

September 2026

Remote, USA

- Engineered a 180-day churn label from scratch on 1.07M unlabeled retail transactions; tuned a scikit-learn/XGBoost classifier (ROC-AUC 0.806), lifting revenue-at-risk capture to 57.6% via value-weighted reweighting

2025 U.S. Flight Delay & Reliability Analysis

Independent Project

September 2026

Remote, USA

- Built a SQL/PostgreSQL star-schema warehouse for ~7M U.S. flight records, cleaned with Python/pandas; wrote seven analytical queries (window functions, CTEs) and visualized findings in an interactive Tableau dashboard

SKILLS

- Programming:** Python, SQL, PostgreSQL, R, Flask, React, pandas, NumPy, scikit-learn, XGBoost, Matplotlib, statsmodels
- ML & Statistics:** Supervised/Unsupervised Learning, Regression, Classification, Hypothesis Testing, Cross-Validation & Hyperparameter Tuning, Model Evaluation (ROC-AUC, Precision/Recall), Data Cleaning, Feature Engineering
- Data Visualization & Business Intelligence:** Tableau, Power BI, Streamlit, Excel, Dashboard Design, KPI Reporting
- Product & Collaboration:** Git/GitHub, Experiment Design, Cross-functional Stakeholder Engagement, Agile, HubSpot
